OBJECTIVE: Web developer with a background in computer science and IT support, seeking to contribute technical and interpersonal skills to organizational growth and effective software and hardware troubleshooting.

EDUCATION:

PerScholas: IT Support

February 2026

Google IT Support Professional

January 2026

Google Cybersecurity

January 2026

Google UX Design

January 2026

Georgia State University: Bachelor of Science in Computer Science

December 2024

SKILLS:

- | | | |
|--------------|--------------|---------|
| • HTML & CSS | • Python | • Node |
| • Django | • JavaScript | • React |
| • SQL | • Java | • Figma |

EXPERIENCE:

Marathon Petroleum Corporation (MPC)

Application Developer Intern

May – August 2023

- Frontend and backend development on Marathon's retail payments application using ASP.NET MVC
- Helped maintain data integrity and data validity between MPC and third-party companies via SQL procedures. Increased Downstream and Midstream work output by 5 percent.
- Aided in converting an MPC website from using ASP.NET Webforms to ASP.NET MVC.

DAPCEP & PwC & Extern

Nonprofit Consulting Extern in Collaboration with PwC

March – May 2024

- Researched similar non-profit organizations for comparative analysis of DAPCEP's programs and impact reporting
- Presented findings and impact assessment framework to company leaders and board of directors of DAPCEP of which two points of my impact assessment framework were planned to be implemented at the next DAPCEP sprint SCRUM framework

UWCI & PwC & Extern

Nonprofit Consulting Extern in Collaboration with PwC

March – May 2024

- Researched similar non-profit organizations' programs and volunteer retention strategies.
- Crafted an impact assessment framework that defines how to qualitatively and quantitatively show impact

PROJECTS/RESEARCH:

Website

Personal Website

June 2022

- Built with Django, a Python library, and Bootstrap, a CSS CDN
- Migrating from Bootstrap legacy technology to using React and Node.js to match UX/UI standards

Website & Mobile App

Weatherly: The Weather App

November - December 2024

- Built with Flutter, Dart, National Weather Service API and Google Firebase
- Displays information & radar provided by National Weather Service API along with having the ability to save and customize settings

Applet

XBRL Scraper

- Constructed with Python and sends emails about queried metric through XBRL and SEC APIs; aided in streamlining technical asset analysis
- Stores the reports into an SQL database.

Data Mining

Diabetes Prediction Modeling

September – December 2024

- Built using Python and data from a CDC Kaggle dataset to predict what lifestyle components contribute to diabetes.

Georgia State University

Math Path Scholar: Tissue Engineering Assistant

May – August 2024

- Crafted manuscripts and posters for new tissue engineering research model and as a result got the chance to present the findings at an upcoming research symposium

LEADERSHIP/ORGANIZATIONS:

National Society of Black Engineers

September 2022

INROADS

June 2022

Per Scholas

October 2025

Computer Science Club

June 2022

- Contributed code to the club's GitHub repository.

ACTIVITIES/AWARDS:

BDPA "Datathon" 4th Place Winner

August 2022

Creatica 2022 Hackathon Participant

June 2022

- Contributed backend code to a project called "Questify" - an app like Kahoot and Quizlet
